

RECONGNIZING OUR TEAMSTERS ACROSS METRO VANCOUVER

The **Annacis Island Wastewater Treatment Plant**, located on Annacis Island in Delta, is the region's largest wastewater treatment facility. It receives and treats wastewater from 14 Metro Vancouver municipalities, safely releasing treated effluent into the Fraser River to protect public health and the environment.

At the heart of this essential operation is an exceptional **Teamsters team**. Pictured above are some of our outstanding Teamsters brothers and sisters working in **Administration, the Chemistry Lab, and the Process Lab**. Together, they play a vital role in health and safety, water quality testing, influent and effluent analysis, process control, optimization, regulatory compliance, and quality assurance.

In short, our region depends on the dedicated work of the **Annacis Island Teamsters**, whose expertise ensures safe plant operations, environmental compliance, and the production of accurate, defensible data. It is work that keeps our communities safe and healthy every day.

We extend our deepest gratitude to this incredible team for their professionalism, dedication, and teamwork. **Thank you for your exceptional service and commitment.**

And a special thank you to **all Metro Vancouver Teamsters brothers and sisters**. Your continued support and solidarity truly make all the difference.

On behalf of President Stan Hennessy, your Union, Business Agents, and staff, thank you for your hard work and solidarity.

TEAMSTERS
STRONG
